

3 year old weighs in at almost 10 stone.

Lu Hao eating one of his massive meals.

Lu Hao is the largest 3 year old in the world. Born in Dashan, China he's broken records weighing almost 10 stone from his enormous appetite.

Toddler Lu Hao has a HUGE appetite, eating around 3 bowls of rice every meal. He weighs in at an astounding 9 pounds and 6 stone. Although his mother (Chen Yuan) knows this, she cannot understand HOW he got this big. When trying to take him swimming for exercise she reports that this only makes him hungrier.

The fact that Lu doesn't like walking makes it worse. He is taken to school by motorbike with his mum, which apparently he quite enjoys.

When not given his normal amount of food

Lu will cry for hours on end until he gets it. He was born a healthy baby but at the age of 3 months Lu started to eat more and more and grew rapidly from then on.

Lu's mum says "We worry that if he carries on at this rate his heart could fail, his doctors say his hormones are quite normal so it's hard to understand how he's this big."

Some could say that this may be somewhat child abuse as the mum has let her child get this unhealthy. But others may argue the case that it is not the mum's fault at all, as she is just reaching his needs.
